### **EXTENSION/FSA COMMENTS:**

**General**: Minor expansions of abnormal dry conditions across portions of Alabama were made to imitate the continued dry conditions by brief periods of rain. Re-evaluation of the status across the state encouraged the removal of some abnormal dryness and adjust the moderate drought to more accurately reflect the soil moisture values, stated by the US Drought Monitor. <u>Jennifer Stanley</u>, Program Technician for Conecuh County stated rain was

scattered for the month of August and no rain has occurred so far in September. The crops were dry and the ones that have had a little rain can only last about another week without it. The Drought Monitor from September 7 portrayed the state to be 42.2 percent no drought, 57.8 percent abnormally dry, and 17.6 severe dry conditions, compared to 100 percent drought free 3 months ago, and 100 percent drought free a year ago. Daytime highs for the week ranged from 92 degrees in Cullman to 100 degrees in Headland. Overnight lows ranged from 46 degrees in Belle Mina to 67 degrees in Mobile Bates. The highest amount of precipitation occurred in Huntsville with 1.49 inches of rain over a period of 1 day.

Cotton/Corn/Peanuts/Soybeans: William Birdsong, Regional Extension Agent at the Wiregrass Research and Extension Center reported cotton harvest has begun but yields will be disappointing this year. The cotton crop this year has been very challenging, disappointing, and financially taxing to the producers. Spotted rains created a mixed bag with this year's crop with some areas progressing better than others. The hot and dry conditions have severely cut yields in all areas. The same story applies to peanuts, but a little less extreme. Crops from Geneva County and westward were not severely hurt as much as crops towards the east and north. Yields have been sporadic, and conditions could worsen. Corn harvest is more than 75 percent complete. Irrigated corn yields were looking good, however dry land yields were low.

Pasture/Hay/Livestock: Thomas Atkinson, County Executive Director for Madison County stated the past two weeks, armyworms have swamped the county, which was a side effect of hot droughty conditions. Pastures and hay crops have taken the worst beating from armyworms. Danny Miller, County Extension Coordinator for DeKalb County noted hay and forages were compromised by unusually high infestations of fall armyworms.

ALABAMA'S Weekly Crop Weather for the Period: Monday September 6, 2010 To Sunday September 12, 2010
